

# CONSULTING

We support  
the global energy  
transition

## Shaping strategy in the dynamic energy landscape

DORIS brings decades of engineering excellence to our Consulting services, helping industries and governments reduce their greenhouse gas emissions from both existing and future sources.

As there is a global shift from reliance on fossil fuels, DORIS provides Consulting services to support the transition to cleaner and more sustainable energy.

We draw on our deep technical expertise, backed by a global footprint of over 1,000 professionals and 60 years experience in the energy sector, to help navigate the regulatory and strategic complexities of decarbonisation under evolving international frameworks.

Our support to governments, international institutions and energy producers spans from national to asset level assessments, specialising in the areas of emissions assessment, abatement technology screening, cost estimation, lifecycle economic analysis and regulatory support.

## Our team and experience

Since 2020, DORIS has delivered high-impact studies focusing on methane and CO<sub>2</sub> emissions abatement through practical, investment-ready solutions.

DORIS has a recognised presence in 17 locations across the world.

With Subject Matter Experts (SMEs) located in key regional centres, we are able to support our clients wherever and whenever they need us.

### CONSULTING

- > Pre-feasibility Studies
- > GHG Emissions assessment & advisory
- > OGMP 2.0 Support
- > Energy transition strategy
- > Power-to-X concept screening
- > Decarbonization project investment
- > Fossil fuel diversification
- > Stakeholder consultation

# DORIS Consulting

---

DORIS utilises proprietary methodologies, tools and regulatory insights to deliver Low Carbon Energy consulting services for all project stages from feasibility, through definition and execution, to operational support and monitoring.

## DECARBONISATION & NET ZERO ROADMAPS

> **Collaborative approach** to support co-creation of energy transition **roadmaps** and plans

## EMISSIONS MANAGEMENT

> **Define technical solutions** to detect & abate existing GHG emissions and prevent future emissions

## DECARBONISATION PROJECT INVESTMENT

> **DORIS in-house techno-economic tools**, and knowledge of the Energy Transition supply chain to **optimise CAPEX, OPEX and implementation schedules**

## ENERGY TRANSITION EXECUTION

> Provide **Engineering and Project Management** support for new projects to **deliver on net zero objectives**

## ENERGY TECHNOLOGY DEVELOPMENT

> **DORIS subject matter experts (SMEs)** to support the transition to Low Carbon Energy
